Iridium GO! Exec

The Iridium GO! Exec is the first portable touchscreen-enabled satellite access terminal and creates a reliable, high quality, global connection for voice and data communications for your smart devices. This rugged, compact device dramatically extends the capabilities of any smartphone, laptop, or tablet by creating a satellite-backed Wi-Fi hotspot – anywhere on the planet.

Small form, Small Team or Individual Connectivity

Iridium Go! Exec provides a truly global, easy to use connectivity pack enabled by the Iridium Certus 100 service supporting messaging, email, phone calls and light web browsing over the Iridium Go! Exec app for up to 5 devices up to 30 metres away, along with two additional voice lines direct from the device. Small enough to fit in a backpack or small pouch, and like other Iridium devices tough enough to withstand rain, sand, dust and rough use. Voice and IP connectivity on the move, on the pause or at the halt, the Iridium Go! Exec can support a small team or individual user anywhere in the world for liaison, reconnaissance, senior user or discrete tasks.

Simple operation

Simply raise the integrated antenna and the battery-powered unit connects quickly and automatically to the Iridium Certus 100 service to create an anywhere Wi-Fi hotspot. The Iridium GO! Exec comes with multiple ports, 2 USB-C's, an external ethernet port, an external antenna port, and an external GPS port. An external antenna kit will be sold separately. It also comes with an SOS button which can contact whatever number you set but the default setting is the IERCC (International Emergency Response Coordination Centre) to help you in a potential emergency (registration required).
